- ✓ Adding A Price Recommendations Widget To Your TrafficMate Powered Site
- ✓ Integrating A Lead Capture Pop-Up On Your TrafficMate Powered Site

So, let's quit the talking now and let's kick off this training with your first class:

Creating A Done-For-You WordPress Blog

As you know by now, TrafficMate is a plugin for WordPress sites. Before you set it up, it is recommended that you have your niche website ready and customized.

Now, we know that doing that takes time, and because of this we are going to show you the easiest way to create a custom WordPress site that is perfect for your niche, in just a few steps. For this, you are going to need a few things:

- ✓ A fresh WordPress install, which you can do by going to the cPanel dashboard provided by your hosting service and doing a quick one-click WordPress installation on your domain.
- ✓ A done-for-you WordPress theme for your niche, which you can get at "viralloop.io". These DFY themes are perfect because they can be installed really quick, and they're already customized to fit your website.

Ok, let's start on the WordPress site that you installed on your domain. Now all you're left to do is to upload your DFY theme files to your site, and you can do a no-frills upload by using the "All-in-one WP migration" plugin.

First, you have to install the plugin. Start by moving over the “plugins” tab on the left-hand sidebar menu, and then click on the “add new” option.

Next, type “all in one wp migration” into the “search plugins” search bar. Now locate the “all in one wp migration” plugin in the results column and click on its corresponding “install now” button. Then, click on “activate”.

Great job! Now it is time to upload your unzipped DFY theme files from your computer. Move over the “all in one wp migration” tab on the left-hand sidebar menu. Now click on the “import” option.

Alright, now click on the “import from” button, and then click on the “file” option. Next, locate your theme files folder in your computer, and open it. Locate the file with the “.wpress” extension and double-click on it.

Now wait until the file imports complete. Once it completes, click on the “proceed” button. Then click on “finish”.

Your site is now fully customized with a DFY theme, and you are now done here. Great job! You can do more customizations and add more information by moving over the “appearance” tab on the sidebar menu and then clicking on the “customize” option to open the customizer.
