

Installing TrafficMate

Alright action takers, you are just done creating your Done-for-You website, and the end results couldn't be more beautiful!

Now it is time for step two, which is to install TrafficMate on your website. TrafficMate is a WordPress plugin that integrates seamlessly with your site after installation, which is way easy as you'll see next.

When you obtain your TrafficMate PRO membership, you'll get access to download the PRO version of the plugin. What you'll get is access to the PRO version ZIP file, which you are going to download to a folder in your computer.

Once you get your plugin file ready, you can start the installation. For this, go to your site's dashboard and move over the "plugins" tab on the left-hand sidebar menu. Next, click on the "upload plugin" button in the following page.

Now click on the "choose file" button. Locate your TrafficMate PRO version ZIP and double-click on it. Then click on the "install now" button. The plugin file will start uploading, and you can see the progress in the upload bar in the lower-left corner.

You will know that the plugin installed after the upload completes because you'll get a "plugin installed successfully" message in the next page.

Great job! Now simply click on the "activate plugin" button. You'll see a "plugin activated" message in the next page, and you can see that TrafficMate is active in the plugins column. Great job!

To access TrafficMate from now on, all you have to do is to move over the "Traffic Mate" tab in the left-hand sidebar menu. There you'll get quick access to all TrafficMate features, with a single click.

Before you continue, make sure to activate your TrafficMate license. First, click on the "traffic mate" option on this sub-menu. In the following page, enter your PRO License key into the "license key" field, and then click on "submit". Now you're good to go!

But! Before you actually start using TrafficMate, you'll need to do a quick cron jobs set up on your site, otherwise TrafficMate won't run as intended.

Now, it is ok if you don't know what a cron job is, or if you don't know how to set it up, because we're going to show you all about it in the next video. Stay tuned!
