

Using TrafficMate To Generate Automated Content

Hey there action takers!

Your new done-for-you website is up and running, and you just installed and configured TrafficMate. Like a boss!

This means you're ready to start using its amazing features, so let's start by showing you how to use it to auto generate content for your niche website.

Ok, so start on your site's dashboard, and move over the "traffic mate" tab you'll find on the left-hand sidebar menu. Now click on the "auto content creation" option.

This will take you to the "auto content" page, where you can generate articles, video, and images for your website with just a few clicks!

Let's generate an article first. Start on the "article search" tab. Now click on the "choose one of the following category" menu button. Then select a content category. Alright, now pick one or more content niches from the list below. This will help you to generate articles that are specifically targeted at those niche searches.

Additionally, you can add a niche keyword into the "enter your keyword" field to further narrow your results. You can now click on the "search category" button.

Ok, now move to the "results" column. See? TrafficMate just generated over a hundred articles that target your category, niches, and keyword.

You can save any of these articles so you can post them to your website later. Simply tick the checkbox corresponding to an article that you want to post, and then click on the "save results" button.

Awesome job! Let's now generate a video. First, click on the "video search" tab. Now enter a keyword that describes the type of video that you want to post into the "enter your keyword" field, then click on the "search" button.

TrafficMate will generate a list of high-quality videos that target your keyword under the "results" column. You can select which videos you'll post by ticking their checkboxes and clicking on the "save results" button.

Great job! Let's now generate images. First, click on the "image search" tab. Now enter a keyword to target related images into the "enter your keyword" field. Then click on the "search button.

TrafficMate will generate a bunch of high-quality images that are directly related to your search term. To select an image to post, click on an image to mark it as selected. You can select as many images as you like. Then, click on the "save results" button.

You will find your saved content by clicking on the "import result" tab. Here you'll find saved articles, videos, and images in separate sections. To post one of your saved content pieces, simply

locate a content that you want to post inside the content column and click on its corresponding “add to post” button. This will post your content to your site, hassle free!

Another cool auto content feature is automatic blog posting. To use this feature, click on the “auto blogging” tab. Next, click on the “add new campaign” button.

Here you’ll have to add a title first. Then to select a “schedule”. Simply enter the interval of “hours” or “days” when content will be posted to your site.

Now enter an “image keyword” and a “video keyword”. Now select a content category using the “category” menu, select your niches, and enter a keyword in the field below.

Lastly, select the contents you want to schedule, and then click on the “save campaign” button. And that’s it! You will find your schedule posts by clicking the “schedule posts” tab. And that is it friends! No other tool will help you to generate content on autopilot this way!
